In Search of Chart Heaven

MS Graph is finally dead

Monday

11:15am

ECHO SWINFORD

After years and years of relying on the watered-down feature set of MS Graph for its charts, Microsoft has finally moved into the 21st century with PowerPoint 2007, which taps into the full power of Excel to meet its charting needs. But with that new power comes a full set of new tools as well. Use the force wisely! Topics will include:

- Inserting charts: are they embedded or linked?
- Chart templates: pros and cons
- A tour through the tools (right-click is your friend)
- Quick-styles are your friends, too

If you have to create charts in PowerPoint 2007, this session is for you.
