

# Video Heaven

## The 2010 Pipeline

GLEN MILLAR

Version 2010 of PowerPoint completely redefines video handling. In addition to a new method of video rendering, you can now edit and apply artistic effects right within the application. For example, you can trim videos, or add poster frames, bookmarks, and fades to your videos. You can even save your whole presentation out as a video. Join this session to understand the PowerPoint 2010 video pipeline. Topics to include:

- Video in: file formats and best practice
- New enhancements: editing and artistic effects
- Video out: playback and exporting options
- Troubleshooting and version compatibility

*This session is for PowerPoint users who want to understand the logic and use of the new video options in 2010.*
